Preface

This document describes the Button Manager API for NVP.

Intended Audience

This document is intended for merchants and developers implementing Website Payment Standard buttons using an API.

Revision History

Revision history for *Website Payments Standard Button Manager API (NVP)*.

TABLE P.1 *Revision History*

Date	Description
06/03/09	Added HTML Variable appendix and updated for version 57.0.

Website Payments Standard Button Manager API Overview

The Website Payments Standard Button Manager API allows you to programatically create, manage, edit, and delete Website Payment Standard buttons, which are the same kind of buttons that you can create from the PayPal Profile. Hosted buttons created by this API reside on PayPal and can use all features, including inventory management; however, you can use this API to create code for non-hosted Website Payment Standard buttons as well.

- [Button Manager Introduction](#)
- [Generated Button Code](#)
- [Button Hosting](#)
- [Hosted Button Manipulation](#)
- [Inventory Management Using Hosted Buttons](#)
- [Button Manager API Summary](#)
- [Granting Third-Party Permission for APIs](#)

Button Manager Introduction

You should consider creating and managing your buttons with the Button Manager API when you are creating more than just a few Website Payment Standard buttons or when you manage buttons for others; for example, if you provide a shopping cart for merchants.

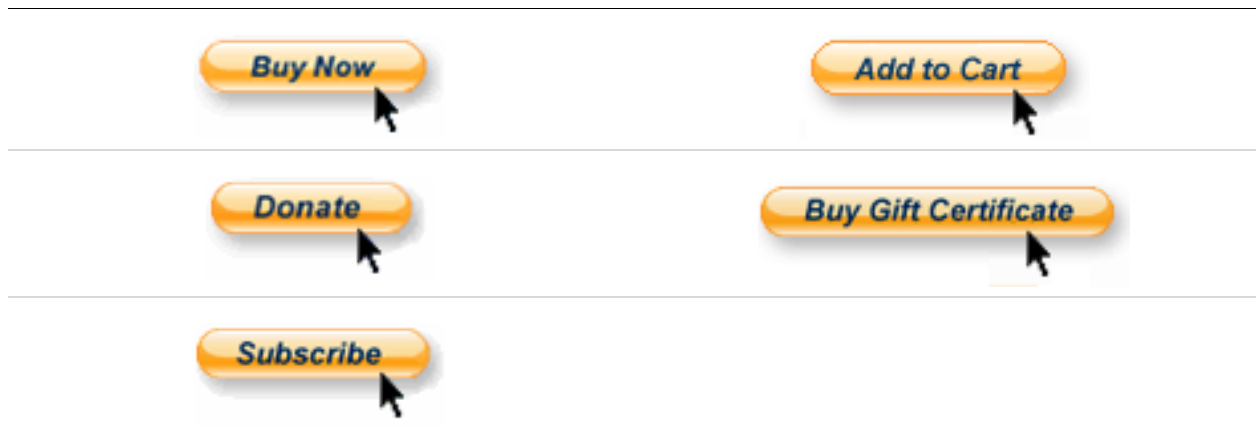

The Button Manager API enables you to manage Website Payment Standard buttons programatically in the same way that you can manage them on PayPal from the My Saved Buttons page of your Profile.

NOTE: You can access your My Saved Buttons page on PayPal by choosing **My Saved Buttons** from the Profile's Selling Preferences column. If no buttons have been created, the menu item is **Create New Button**.

You can use the API to create the following types of Website Payment Standard buttons:

- **Buy Now**
- **Add to Cart and View Cart**
- **Donate**
- **Buy Gift Certificate**
- **Subscribe and Unsubscribe**

The following buttons are some of those that you can create using the Button Manager API:

Generated Button Code

When you create a button, PayPal responds by providing code that you can paste into your web page or document.

PayPal generates code that you can use for the button, which includes

- HTML code for including the button in web pages
- URL link code for adding buttons to email and documents that support links

NOTE: Not all buttons that can be created are available to merchants in every country; for example, German merchants cannot use **Subscribe** buttons even though they can be created through the API. If you can create the button for the specified country using [Create PayPal payment button](#) on PayPal, your merchant will be able to use the button.

The following example shows the PayPal code to display a hosted **Add to Cart** button for a wireless mouse:

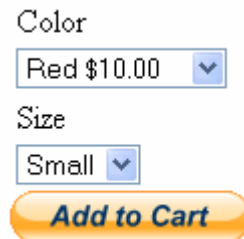

```

<form target="paypal" action="https://www.sandbox.paypal.com/cgi-bin/webscr" method="post">
<input type="hidden" name="cmd" value="_s-xclick">
<input type="hidden" name="hosted_button_id" value="19218">
<table>
<tr><td><input type="hidden" name="on0" value="Color">Color</td></tr><tr><td><select name="os0">
  <option value="Red">Red $10.00
  <option value="Blue">Blue $8.00
  <option value="Green">Green $12.00
</select> </td></tr>
<tr><td><input type="hidden" name="on1" value="Size">Size</td></tr><tr><td><select name="os1">
  <option value="Small">Small
  <option value="Large">Large
</select> </td></tr>
</table>
<input type="hidden" name="currency_code" value="USD">
<input type="image"
src="https://www.sandbox.paypal.com/en_US/i/btn/btn_cart_LG.gif" border="0"
name="submit" alt="">

</form>

```

When you display a web page with this code, this button appears:

PayPal-generated code for a link would be as follows:

```

https://www.sandbox.paypal.com/cgi-bin/webscr?cmd=_s-xclick&hosted_button_id=19218

```

For a link, PayPal does not generate code for options.

Button Hosting

Buttons that you can view on the My Saved Buttons page of your PayPal profile are called *hosted* buttons because they reside on PayPal. The API can create three kinds of buttons: hosted, encrypted, and clear text.

- Hosted buttons are stored on PayPal. The parameters associated with this kind of button are secure.

Hosted buttons provide the greatest flexibility because you can instruct PayPal to change them dynamically and PayPal maintains information about their state, such as the inventory level associated with the button.

- Encrypted buttons are not stored on PayPal. The parameters associated with this kind of button are encrypted.

Encrypted buttons are similar to hosted buttons with regards to secure operation; however, you must update the web pages that use an encrypted button each time the button or its associated information changes. You should only use an encrypted button if a hosted button cannot be used.

- Clear text buttons are not stored on PayPal. The parameters associated with this kind of button are not encrypted.

Clear text buttons are not hosted and are not encrypted. They can be used dynamically because you can change the value of a parameter “on the fly.” However, if you use them, recognize the risk that sensitive information can be altered or stolen.

Hosted Button Manipulation

When you create a hosted button, the response includes an ID that allows you to manipulate the button using the Button Manager API.

Specifically, you can

- Get a list of all hosted buttons defined, which allows you to obtain a list of all your buttons for further programatic manipulation
- Get details about a hosted button, which allows you to identify the parameters and values associated with a button
- Update a hosted button, which allows you to change individual parameters, such as price, in a hosted button
- Manage hosted button status; currently, you can only delete a button
- Get and set inventory information associated with the button

Inventory Management Using Hosted Buttons

If you use hosted buttons, you can set inventory values for the item associated with the button and get inventory values for the item. You can also track inventory on options within an item, such as color, size, and so on.

If you enable inventory management for a button, PayPal tracks inventory for you and also lets your buyer know whether the item is sold out. You can specify inventory tracking on an item-by-item basis and also by option, such as color or size, within the item.

You are alerted by e-mail if the inventory on hand falls below the threshold you specify. If an item is sold out, you can specify whether or not to accept a payment anyway. Optionally, you can specify a URL to which your buyer's browser is redirected if the item is sold out.

Additionally, you can enable profit and loss tracking for an item or option associated with a button. If you enable this feature, you must provide the cost of the item or option. PayPal then calculates your gross profit, which is the selling price of the item less the specified cost.

Button Manager API Summary

The Button Manager API is available for both NVP and SOAP.

API Operation	Description
BMCreateButton	Create button code
BMUpdateButton	Update a hosted button
BMManageButtonStatus	Delete a button
BMGetButtonDetails	Obtain information about the parameters associated with a button
BMButtonSearch	Obtain a list of all buttons
BMGetInventory	Obtain the inventory levels associated with a button
BMSetInventory	Specify the inventory levels associated with a button

Granting Third-Party Permission for APIs

If you allow a shopping cart or another party to create buttons on your behalf, you must grant the party permission to execute Button Manager API operations for you.

To grant third-party permissions

1. Log in to your PayPal account.
2. Select My Account Profile.
3. Click "API Access" from the Profile Summary.
4. Click "Grant API Permission."
5. Click to "Configure a custom API authorization."
6. Enter your Partner API Username, as specified by your shopping cart or third party.
7. Click to check each Button Manager API to which you want to provide access:

- ☐ BMManageButtonStatus
- ☐ BMCreateButton
- ☐ BMUpdateButton
- ☐ BMSetInventory
- ☐ BMGetInventory
- ☐ BMButtonSearch
- ☐ BMGetButtonDetails

8. Click **Submit.**

2

Using the Button Manager API

These examples show basic Button Manager API capabilities. The examples show how to create buttons and set inventory levels.

- [Specifying HTML Variables](#)
- [Creating a Button Using NVP](#)
- [Tracking Inventory for Menu Items Using NVP](#)

Specifying HTML Variables

When you create or update a button using the Button Manager API, you must specify the same HTML variables that you specify when creating any Website Payments Standard button. Although you can use the `L_BUTTONVARn` field to specify any HTML variables, some variables are commonly used in specific ways.

The following table provides additional information about some of these variables:

HTML Variable	Notes
item_name	Name or description of item. Must be specified for Add to Cart buttons. Character length and limitations: 127 single-byte alphanumeric characters.
amount	The price or amount of the item. Required for Add to Cart buttons. May not be used when a dropdown with price (<code>L_OPTION0PRICE<i>n</i></code>) is defined. Limitations: Value must be a positive number. No currency symbol. Must have two decimal places, decimal separator must be a period (.), and the optional thousands separator must be a comma (,).
a3	Price of subscription. Must be specified for Subscribe buttons. Value must be a positive number. No currency symbol. Must have two decimal places, decimal separator must be a period (.), and the optional thousands separator must be a comma (,).
p3	Regular billing cycle. Must be specified for Subscribe buttons. Limitations: Must be a positive integer greater than 0 and less than or equal to 30
t3	Regular billing cycle units. Must be specified for Subscribe buttons.
shopping_url	URL where recipients can shop and redeem gift certificates. Required for Gift Certificate buttons. Character length and limitations: 255 single-byte alphanumeric characters

HTML Variable	Notes
no_note	Must be specified for Subscribe buttons. Enables a subscriber to not be prompted to include a note with the subscription, a function which PayPal subscriptions does not support. This variable must be included, and the value must be set to 1.
business	Secure Merchant ID or Email Address. When omitted, defaults to the secure merchant ID of the merchant. If an email address is specified then it the following requirements apply: <ul style="list-style-type: none">• A merchant or 3rd Party calling the API directly may specify an unregistered email and create an unencrypted button only.• A 3rd Party calling the API on behalf of a registered merchant must specify an email address associated with the merchant account. Character length and limitations: 127 single-byte characters.
item_number	Item number or ID. Character length and limitations: 127 single-byte alphanumeric characters.
lc	If specified, it overrides the value set in the BUTTONCODE field.

For a complete list of HTML variables and complete information, see [HTML Variables for Website Payments Standard](#).

Creating a Button Using NVP

The example shows the NVP parameters for creating a hosted **Add to Cart** button of the standard size. The button is also associated with menu items.

```
...
&BUTTONCODE=HOSTED
&BUTTONTYPE=CART
&L_BUTTONVAR0=business=merchant@abc.com
&L_BUTTONVAR1=item_name=Wireless%20Mouse
&L_BUTTONVAR2=amount=10.50
&L_BUTTONVAR3=no_shipping=1
&L_BUTTONVAR4=currency_code=USD
&L_BUTTONVAR5=no_note=1
&OPTION0NAME=Color
&L_OPTION0SELECT0=Red
&L_OPTION0SELECT1=Blue
&L_OPTION0SELECT2=Green
&L_OPTION0PRICE0=10.00
&L_OPTION0PRICE1=8.00
&L_OPTION0PRICE2=12.00
&OPTION1NAME=Size
&L_OPTION1SELECT0=Small
&L_OPTION1SELECT1=Large
&BUTTONIMAGE=reg
...
```

The button includes menus that allow you to specify the color and size. Each color is associated with a specific price. The button variables (L_BUTTONVAR0, and such), enable you to specify the same HTML variables as you ordinarily do using Website Payments Standard; for information see [HTML Variables for Website Payments Standard](#).

Tracking Inventory for Menu Items Using NVP

The example shows the NVP parameters that enable tracking of inventory and profit and loss for three kinds of product whose option number specifies the position in the drop-down menu for the option.

```
...  
&TRACKINV=1  
&TRACKPNL=1  
&OPTIONINDEX=0  
&L_OPTIONNUMBER0=1001  
&L_OPTIONQTY0=100  
&L_OPTIONALERT0=5  
&L_OPTIONCOST0=4.50  
&L_OPTIONNUMBER1=1002  
&L_OPTIONQTY1=200  
&L_OPTIONALERT1=5  
&L_OPTIONCOST1=5.50  
&L_OPTIONNUMBER2=1003  
&L_OPTIONQTY2=150  
&L_OPTIONALERT2=5  
&L_OPTIONCOST2=5.00  
&SOLDOUTURL=http://mysoldoutpage.com
```

3

Button Manager API Reference

The Button Manager API enables you to programatically create, edit, and delete Website Payment Standard buttons hosted on PayPal and track product inventory associated with these buttons. You can also create non-hosted buttons with the Button Manager API; however, button maintenance and inventory management are only supported for hosted buttons.

- [BMCreateButton API Operation](#)
- [BMUpdateButton API Operation](#)
- [BMButtonSearch API Operation](#)
- [BMCreateButton API Operation](#)
- [BMManageButtonStatus API Operation](#)
- [BMSetInventory API Operation](#)
- [BMGetInventory API Operation](#)

BMCreateButton API Operation

Use the `BMCreateButton` API operation to create a Website Payments Standard button. You can create either a button that is hosted on PayPal or a non-hosted button.

- [BMCreateButton Request](#)
- [BMCreateButton Response](#)
- [BMCreateButton Errors](#)

BMCreateButton Request

The request fields specify the characteristics of your button, which include associated menu items related to the button. You can specify up five menu items, each of which can include up to 10 possible selections.

BMCreateButton Request Fields

Field	Description
METHOD	<i>(Required)</i> <code>BMCreateButton</code>

Field	Description
BUTTONCODE	<p>(Optional) The kind of button code to create. It is one of the following values:</p> <ul style="list-style-type: none"> HOSTED - A secure button stored on PayPal; default for all buttons except View Cart and Unsubscribe ENCRYPTED - An encrypted button, not stored on PayPal; default for View Cart button CLEARTEXT - An unencrypted button, not stored on PayPal; default for Unsubscribe button
BUTTONTYPE	<p>(Required) The kind of button you want to create. It is one of the following values:</p> <ul style="list-style-type: none"> BUYNOW - Buy Now button CART - Add to Cart button GIFTCERTIFICATE - Gift Certificate button SUBSCRIBE - Subscribe button DONATE - Donate button UNSUBSCRIBE - Unsubscribe button VIEWCART - View Cart button
BUTTONSUBTYPE	<p>(Optional) The use of button you want to create. It is one of the following values:</p> <ul style="list-style-type: none"> PRODUCTS - button is used to purchase products; default for Buy Now and Add to Cart buttons SERVICES - button is used to purchase services
L_BUTTONVAR <i>n</i>	<p>(Optional) HTML standard button variables, which are described in HTML Variables for Website Payments Standard</p> <p>It is a list of variables, in which <i>n</i> is a digit between 0 and 999, inclusive; do not include leading zeros.</p> <p>Character length and limitations: 63 single-byte alphanumeric characters each</p>
L_TEXTBOX <i>n</i>	<p>xs:string</p> <p>(Optional) Text description for a menu item</p> <p>It is a list of variables, in which <i>n</i> is a digit between 0 and 1, inclusive.</p>
BUTTONIMAGE	<p>(Optional) The kind of button image. It is one of the following values:</p> <ul style="list-style-type: none"> REG - regular; default unless a button URL is specified SML - small CC - small button image with credit card logos; not applicable for Unsubscribe or View Cart buttons <p>NOTE: Specify either the kind of button image or the URL.</p>
BUTTONIMAGEURL	<p>xs:string</p> <p>(Optional) The button's URL</p> <p>NOTE: Specify either the kind of button image or the URL.</p>

Field	Description
BUYNOWTEXT	(Optional) The button text for a Buy Now button. It is one of the following values: <ul style="list-style-type: none"> • BUYNOW - button text is Buy Now; default • PAYNOW - button text is Pay Now
SUBSCRIBETEXT	(Optional) The button text for a Subscribe button. It is one of the following values: <ul style="list-style-type: none"> • BUYNOW - button text is Buy Now • SUBSCRIBE - button text is Subscribe; default
BUTTONCOUNTRY	(Optional) The country in which the transaction occurs. See Country Codes for a list of country codes. By default, it is the merchant's country of registration with PayPal.
BUTTONLANGUAGE	xs:string (Optional) The language in which to display the button text. It must be compatible with the country code. Character length and limitations: 2 single-byte alphanumeric characters

Option Details Fields

Field	Description
OPTION n NAME	(Optional) The menu name It is one or more variables, in which n is a digit between 0 and 4, inclusive, for hosted buttons; otherwise, it is a digit between 0 and 9, inclusive.
L_OPTION n SELECT x	(Optional) The menu item's name It is a list of variables for each OPTION n NAME, in which x is a digit between 0 and 9, inclusive.
L_OPTION0PRICE x	(Optional) The price associated with the first menu item It is a list of variables for each OPTION0NAME, in which x is a digit between 0 and 9, inclusive. NOTE: If you specify a price, you cannot set a button variable to amount.

Button Language Options

The button language must be compatible with the country identified by the country code.

Country	Button Language Options
All countries not identified below	<ul style="list-style-type: none"> • en - English; default
Austria	<ul style="list-style-type: none"> • de - German; default • en - English

BMCreateButton Response

The response contains an ID if the button is hosted on PayPal, and code for HTML in a website and for a link in email.

BMCreatButton Response Fields

Field	Description
WEBSITECODE	HTML code for web pages
EMAILLINK	Code for email links and links in other documents that support external links
HOSTEDBUTTONID	ID of a PayPal-hosted button

BMCreatButton Errors

Error Code	Short Message	Long Message	Correcting This Error...
10001	Internal Error	Internal Error	
11923	Invalid Argument	The button image value specified is invalid.	
11924	Invalid Argument	The button image URL specified is invalid.	
11925	Invalid Argument	The button type specified is invalid.	
11926	Invalid Data	One of the parameters specified using ButtonVar is invalid.	
11927	Invalid Argument	The buy now button text specified is invalid.	
11928	Invalid Argument	The email or merchant ID specified is invalid.	
11929	Invalid Data	A cart button must have an item name and amount specified.	
11930	Invalid Data	A gift certificate button must have a valid shopping URL specified.	
11931	Invalid Argument	The subscription button text specified is invalid.	
11932	Invalid Data	You must specify a corresponding number of entries for option names and selections.	
11933	Invalid Data	You cannot skip index numbers for option selections. Option selections must be specified sequentially.	
11934	Invalid Data	You must specify the same number of entries for option prices and selections.	

Error Code	Short Message	Long Message	Correcting This Error...
11936	Invalid Data	You cannot specify both an item price and prices for individual selections within an option.	
11937	Invalid Argument	A text box name specified is invalid. Text box names must not exceed 64 characters.	
11938	Invalid Argument	The button code value specified is invalid.	
11940	Invalid Argument	An option name specified is invalid. Option names must not exceed 64 characters.	
11941	Invalid Argument	An option selection value specified is invalid. Option selection values must not exceed 64 characters.	
11942	Invalid Argument	An option price value specified is invalid. Make sure any punctuation marks are in the correct places.	
11943	Invalid Argument	The button country value specified is invalid.	
11945	Invalid Data	The button country and language code combination specified is invalid.	
11947	Invalid Argument	The tax rate specified is invalid. Make sure any punctuation marks are in the correct places and value specified is in the range 0.0 to 100.	
11948	Invalid Argument	The amount specified is invalid. Make sure any punctuation marks are in the correct places.	

BMUpdateButton API Operation

Use the `BMUpdateButton` API operation to modify a Website Payments Standard button that is hosted on PayPal. This operation replaces all fields in the specified button; therefore, you must specify a value for each field you want to include for the button, whether or not it changed.

- [BMUpdateButton Request](#)
- [BMUpdateButton Response](#)
- [BMUpdateButton Errors](#)

BMUpdateButton Request

The hosted button ID identifies the button you want to modify. The remaining request fields specify the characteristics of your button.

BMUpdateButton Request Fields

Field	Description
METHOD	<i>(Required)</i> BMUpdateButton
HOSTEDBUTTONID	<i>(Required)</i> The ID of the hosted button you want to modify.
BUTTONTYPE	<p><i>(Required)</i> The kind of button you want to update. It is one of the following values:</p> <ul style="list-style-type: none"> • BUYNOW - Buy Now button • CART - Add to Cart button • GIFTCERTIFICATE - Gift Certificate button • SUBSCRIBE - Subscribe button • DONATE - Donate button • UNSUBSCRIBE - Unsubscribe button • VIEWCART - View Cart button <p>NOTE: You cannot change the kind of button after the button has been created.</p>
BUTTONCODE	<p><i>(Optional)</i> The kind of button code to create. It is one of the following values:</p> <ul style="list-style-type: none"> • HOSTED - A secure button stored on PayPal; default for all buttons except View Cart and Unsubscribe • ENCRYPTED - An encrypted button, not stored on PayPal; default for View Cart button • CLEARTEXT - An unencrypted button, not stored on PayPal; default for Unsubscribe button <p>NOTE: You cannot change the kind of button code after the button has been created.</p>
BUTTONSUBTYPE	<p><i>(Optional)</i> The use of button you want to create. It is one of the following values:</p> <ul style="list-style-type: none"> • PRODUCTS - button is used to purchase products; default for Buy Now and Add to Cart buttons • SERVICES - button is used to purchase services <p>NOTE: You cannot change the button usage after the button has been created.</p>
L_BUTTONVAR n	<p><i>(Optional)</i> HTML standard button variables, which are described in HTML Variables for Website Payments Standard</p> <p>It is a list of variables, in which n is a digit between 0 and 999, inclusive; do not include leading zeros.</p> <p>Character length and limitations: 63 single-byte alphanumeric characters each</p>

Field	Description
L_TEXTBOX n	xs:string (Optional) Text description for a menu item It is a list of variables, in which n is a digit between 0 and 1, inclusive.
BUTTONIMAGE	(Optional) The kind of button image. It is one of the following values: <ul style="list-style-type: none"> REG - regular; default SML - small CC - small button image with credit card logos; not applicable for Unsubscribe or View Cart buttons NOTE: Specify either the kind of button image or the URL.
BUTTONIMAGEURL	xs:string (Optional) The button's URL NOTE: Specify either the kind of button image or the URL.
BUYNOWTEXT	(Optional) The button text for a Buy Now button. It is one of the following values: <ul style="list-style-type: none"> BUYNOW - button text is Buy Now; default PAYNOW - button text is Pay Now
SUBSCRIBETEXT	(Optional) The button text for a Subscribe button. It is one of the following values: <ul style="list-style-type: none"> BUYNOW - button text is Buy Now SUBSCRIBE - button text is Subscribe; default
BUTTONCOUNTRY	(Optional) The country in which the transaction occurs. See Country Codes for a list of country codes. By default, it is the merchant's country of registration with PayPal.
BUTTONLANGUAGE	xs:string (Optional) The language in which to display the button text. It must be compatible with the country code. Character length and limitations: 2 single-byte alphanumeric characters

Option Details Fields

Field	Description
OPTION n NAME	(Optional) The menu name It is one or more variables, in which n is a digit between 0 and 4, inclusive, for hosted buttons; otherwise, it is a digit between 0 and 9, inclusive.

L_OPTIONnSELECTx	<p>(Optional) The menu item's name</p> <p>It is a list of variables for each OPTIONnNAME, in which x is a digit between 0 and 9, inclusive.</p>
L_OPTION0PRICEx	<p>(Optional) The price associated with the first menu item</p> <p>It is a list of variables for each OPTION0NAME, in which x is a digit between 0 and 9, inclusive.</p> <p>NOTE: If you specify a price, you cannot set a button variable to amount.</p>

Button Language Options

The button language must be compatible with the country identified by the country code.

Country	Button Language Options
All countries not identified below	<ul style="list-style-type: none"> en - English; default
Austria	<ul style="list-style-type: none"> de - German; default en - English
Belgium	<ul style="list-style-type: none"> en - English; default nl - Dutch fr - French

BMUpdateButton Response

The response contains the hosted button ID, code for HTML in a website, and code for a link in email.

BMUpdateButton Response Fields

Field	Description
WEBSITECODE	HTML code for web pages
EMAILLINK	Code for email links and links in other documents that support external links
HOSTEDBUTTONID	ID of a PayPal hosted button

BMUpdateButton Errors

Error Code	Short Message	Long Message	Correcting This Error...
10001	Internal Error	Internal Error	
11923	Invalid Argument	The button image value specified is invalid.	
11924	Invalid Argument	The button image URL specified is invalid.	
11925	Invalid Argument	The button type specified is invalid.	
11926	Invalid Data	One of the parameters specified using ButtonVar is invalid.	

Error Code	Short Message	Long Message	Correcting This Error...
11927	Invalid Argument	The buy now button text specified is invalid.	
11928	Invalid Argument	The email or merchant ID specified is invalid.	
11929	Invalid Data	A cart button must have an item name and amount specified.	
11930	Invalid Data	A gift certificate button must have a valid shopping URL specified.	
11931	Invalid Argument	The subscription button text specified is invalid.	
11932	Invalid Data	You must specify a corresponding number of entries for option names and selections.	
11933	Invalid Data	You cannot skip index numbers for option selections. Option selections must be specified sequentially.	
11934	Invalid Data	You must specify the same number of entries for option prices and selections.	
11936	Invalid Data	You cannot specify both an item price and prices for individual selections within an option.	
11937	Invalid Argument	A text box name specified is invalid. Text box names must not exceed 64 characters.	
11938	Invalid Argument	The button code value specified is invalid.	
11940	Invalid Argument	An option name specified is invalid. Option names must not exceed 64 characters.	
11941	Invalid Argument	An option selection value specified is invalid. Option selection values must not exceed 64 characters.	
11942	Invalid Argument	An option price value specified is invalid. Make sure any punctuation marks are in the correct places.	
11943	Invalid Argument	The button country value specified is invalid.	
11945	Invalid Data	The button country and language code combination specified is invalid.	

Error Code	Short Message	Long Message	Correcting This Error...
11947	Invalid Argument	The tax rate specified is invalid. Make sure any punctuation marks are in the correct places and value specified is in the range 0.0 to 100.	
11948	Invalid Argument	The amount specified is invalid. Make sure any punctuation marks are in the correct places.	

BMButtonSearch API Operation

Use the `BMButtonSearch` API operation to obtain a list of your hosted Website Payments Standard buttons.

- [BMButtonSearch Request](#)
- [BMButtonSearch Response](#)
- [BMButtonSearch Errors](#)

BMButtonSearch Request

The request contains optional fields that are not currently used. All hosted buttons are automatically requested.

BMButtonSearch Request Fields

Field	Description
METHOD	<i>(Required)</i> <code>BMButtonSearch</code>
STARTDATE	<i>(Required)</i> Starting date for the search, such as 12/01/09
ENDDATE	<i>(Optional)</i> Ending date for the search, such as 12/31/09

BMButtonSearch Response

The response contains a list of all hosted buttons and their associated characteristics.

BMButtonSearch Response Fields

L_HOSTEDBUTTONID n	The hosted button ID It is a list of variables, in which n is a digit between 0 and 9, inclusive.
L_BUTTONTYPE n	The hosted button ID It is a list of variables, in which n is a digit between 0 and 9, inclusive.
L_ITEMNAME n	The item name It is a list of variables, in which n is a digit between 0 and 9, inclusive.
L_MODIFYDATE n	The date created or last changed It is a list of variables, in which n is a digit between 0 and 9, inclusive.

BMButtonSearch Errors

Error Code	Short Message	Long Message	Correcting This Error...
10001	Internal Error	Internal Error	
11994	Search Warning	You have exceeded the maximum number of buttons that can be returned. Please adjust your search parameters if required.	
11997	Invalid Argument	A start date value must be specified.	
11998	Invalid Argument	The start date specified is invalid.	
11999	Invalid Argument	The end date specified is invalid.	

BMGetButtonDetails API Operation

Use the `BMGetButtonDetails` API operation to obtain information about a hosted Website Payments Standard button. You can use this information to set the fields that have not changed when updating a button.

- [BMGetButtonDetails Request](#)
- [BMGetButtonDetails Response](#)
- [BMUpdateButton Errors](#)

BMGetButtonDetails Request

The request consists of only the ID of the hosted button whose details you want to obtain.

BMGetButtonDetails Request Fields

Field	Description
METHOD	(Required) BMGetButtonDetails
HOSTEDBUTTONID	(Required) The ID of the hosted button whose details you want to obtain.

BMGetButtonDetails Response

The response fields contain all non-inventory information related to the button.

BMGetButtonDetails Response Fields

Field	Description
BUTTONTYPE	The kind of button. It is one of the following values: <ul style="list-style-type: none"> • BUYNOW - Buy Now button • CART - Add to Cart button • GIFTCERTIFICATE - Gift Certificate button • SUBSCRIBE - Subscribe button • DONATE - Donate button • UNSUBSCRIBE - Unsubscribe button • VIEWCART - View Cart button
BUTTONCODE	The kind of button code. It is one of the following values: <ul style="list-style-type: none"> • HOSTED - A secure button stored on PayPal • ENCRYPTED - An encrypted button, not stored on PayPal • CLEARTXT - An unencrypted button, not stored on PayPal
BUTTONSUBTYPE	The use of button. It is one of the following values: <ul style="list-style-type: none"> • PRODUCTS - button is used to purchase products • SERVICES - button is used to purchase services
HOSTEDBUTTONID	ID of a PayPal hosted button
WEBSITECODE	HTML code for web pages
EMAILLINK	Code for email links and links in other documents that support external links
L_BUTTONVAR n	HTML standard button variables, which are described in HTML Variables for Website Payments Standard It is a list of variables, in which n is a digit between 0 and 9, inclusive. Character length and limitations: 63 single-byte alphanumeric characters each
L_TEXTBOX n	xs:string Text description for a menu item It is a list of variables, in which n is a digit between 0 and 2, inclusive.

Field	Description
BUTTONIMAGE	The kind of button image. It is one of the following values: <ul style="list-style-type: none"> • REG - regular • SML - small • CC - credit card logos
BUTTONIMAGEURL	xs:string The button's URL
BUYNOWTEXT	The button text for a Buy Now button. It is one of the following values: <ul style="list-style-type: none"> • BUYNOW - button text is Buy Now • PAYNOW - button text is Pay Now
SUBSCRIBETEXT	The button text for a Subscribe button. It is one of the following values: <ul style="list-style-type: none"> • BUYNOW - button text is Buy Now • SUBSCRIBE - button text is Subscribe
BUTTONCOUNTRY	The country in which the transaction occurs. See Country Codes for a list of country codes. By default, it is the merchant's country of registration with PayPal.
BUTTONLANGUAGE	xs:string The language in which to display the button text Character length and limitations: 2 single-byte alphanumeric characters

Option Details Fields

Field	Description
OPTION n NAME	(Optional) The menu name It is one or more variables, in which n is a digit between 0 and 4, inclusive, for hosted buttons; otherwise, it is a digit between 0 and 9, inclusive.

<code>L_OPTIONnSELECTx</code>	<p><i>(Optional)</i> The menu item's name</p> <p>It is a list of variables for each <code>OPTIONnNAME</code>, in which <code>x</code> is a digit between 0 and 9, inclusive.</p>
<code>L_OPTION0PRICEx</code>	<p><i>(Optional)</i> The price associated with the first menu item</p> <p>It is a list of variables for each <code>OPTION0NAME</code>, in which <code>x</code> is a digit between 0 and 9, inclusive.</p> <p>NOTE: If you specify a price, you cannot set a button variable to amount.</p>

BMGetButtonDetails Errors

Error Code	Short Message	Long Message	Correcting This Error...
10001	Internal Error	Internal Error	
11950	Invalid Data	A hosted button ID must be specified.	
11951	Invalid Argument	The hosted button ID specified is invalid.	
11951	Invalid Argument	The hosted button ID specified is invalid.	
11992	Invalid Argument	You do not have permissions to access this button. Please check the hosted button ID and try again.	

BMManageButtonStatus API Operation

Use the `BMManageButtonStatus` API operation to change the status of a hosted button. Currently, you can only delete a button.

- [BMManageButtonStatus Request](#)
- [BMManageButtonStatus Response](#)
- [BMUpdateButton Errors](#)

BMManageButtonStatus Request

The request specifies the hosted button's ID and the status to which you want to set the button.

BMManageButtonStatus Request Fields

Field	Description
METHOD	<i>(Required)</i> BMManageButtonStatus
HOSTEDBUTTONID	<i>(Required)</i> The ID of the hosted button whose status you want to change.
BUTTONSTATUS	<i>(Required)</i> The new status of the button. It is one of the following values: <ul style="list-style-type: none">DELETE - the button is deleted from PayPal

BMManageButtonStatus Response

The response does not include any fields that are specific to the BMManageButtonStatus API operation.

BMManageButtonStatus Errors

Error Code	Short Message	Long Message	Correcting This Error...
10001	Internal Error	Internal Error	
11950	Invalid Data	A hosted button ID must be specified.	
11951	Invalid Argument	The hosted button ID specified is invalid.	
11951	Invalid Argument	The hosted button ID specified is invalid.	
11992	Invalid Argument	You do not have permissions to access this button. Please check the hosted button ID and try again.	
11993	Invalid Argument	The button status value specified is not valid.	

BMSetInventory API Operation

Use the BMSetInventory API operation to set the inventory level and inventory management features for the specified button. When you set the inventory level for a button, PayPal can track inventory, calculate the gross profit associated with sales, send you an alert when inventory drops below a specified quantity, and manage sold out conditions.

- [BMSetInventory Request](#)
- [BMSetInventory Response](#)
- [BMSetInventory Errors](#)

BMSetInventory Request

The request specifies inventory values related to a hosted button as well as inventory values that are specific to each menu item associated with the button.

BMSetInventory Request Fields

Field	Description
METHOD	<i>(Required)</i> BMSetInventory
HOSTEDBUTTONID	<i>(Required)</i> The ID of the hosted button whose inventory you want to set.
TRACKINV	<i>(Required)</i> Whether to track inventory levels associated with the button. It is one of the following values: <ul style="list-style-type: none"> 0 - do not track inventory 1 - track inventory
TRACKPNL	<i>(Required)</i> Whether to track the gross profit associated with inventory changes. It is one of the following values: <ul style="list-style-type: none"> 0 - do not track the gross profit 1 - track the gross profit <p>NOTE: The gross profit is calculated as the price of the item less its cost, multiplied by the change in the inventory level since the last call to BMSetInventory.</p>
OPTIONINDEX	<i>(Optional)</i> Option index, which identifies the button. Option index 0 is the menu that contains the price if one exists; otherwise, it is the first menu without a price. Character length and limitations: 1 single-byte alphanumeric character
SOLDOUTURL	<i>(Optional)</i> The URL to which the buyer's browser is redirected when the inventory drops to 0 <p>NOTE: Specifying a URL in this field also prevents a sale when the inventory drops to 0; otherwise, sales can continue even when inventory is unavailable.</p> Character length and limitations: 127 single-byte alphanumeric characters

Item Tracking Details Fields

ITEMNUMBER	<i>(Optional)</i> The ID for an item associated with this button
ITEMQTY	The quantity you want to specify for the item associated with this button. Specify either the absolute quantity in this field or the change in quantity in the quantity delta field
ITEMQTYDELTA	The change in quantity you want to specify for the item associated with this button. Specify either the change in quantity in this field or the absolute quantity in the item quantity field

ITEMALERT	(Optional) The quantity of the item associated with this button below which PayPal sends you an email notification
ITEMCOST	(Optional) The cost of the item associated with this button

Option Tracking Details Fields

L_OPTIONNUMBER n	(Optional) The menu item's ID for an option in a dropdown menu It is a list of variables for each menu item, in which n is a digit between 0 and 9, inclusive.
L_OPTIONQTY n	The quantity you want to specify for the option associated with this menu item. Specify either the absolute quantity in this field or the change in quantity in the quantity delta field It is a list of variables for each menu item, in which n is a digit between 0 and 9, inclusive.
L_OPTIONSELECT n	(Optional) The menu item's name in a dropdown menu It is a list of variables for each menu item, in which n is a digit between 0 and 9, inclusive.
L_OPTIONQTYDELTA n	The change in quantity you want to specify for the option associated with this menu item. Specify either the change in quantity in this field or the absolute quantity in the quantity field It is a list of variables for each menu item, in which n is a digit between 0 and 9, inclusive.
L_OPTIONALERT n	(Optional) The quantity of the option associated with this menu item below which PayPal sends you an email notification It is a list of variables for each menu item, in which n is a digit between 0 and 9, inclusive.
L_OPTIONCOST n	(Optional) The cost of the option associated with this menu item It is a list of variables for each menu item, in which n is a digit between 0 and 9, inclusive. Limitations: Value must be a positive number, with no currency symbol. It must have two decimal places and the decimal separator must be a period (.). It may have an optional comma (,) for the thousands separator.

BMSetInventory Response

The response consists of a transaction ID.

BMSetInventory Response Fields

Field	Description
TRANSACTIONID	Transaction ID

BMGetInventory API Operation

Use the `BMGetInventory` API operation to determine the inventory levels and other inventory-related information for a button and menu items associated with the button. Typically, you call `BMGetInventory` to obtain field values before calling `BMSetInventory` to change the inventory levels.

- [BMGetInventory Request](#)
- [BMGetInventory Response](#)
- [BMGetInventory Errors](#)

BMGetInventory Request

The hosted button ID identifies the button whose inventory you want to track.

BMGetInventory Request Fields

Field	Description
METHOD	<i>(Required)</i> <code>BMGetInventory</code>
HOSTEDBUTTONID	<i>(Required)</i> The ID of the hosted button whose inventory information you want to obtain.

BMGetInventory Response

The response fields contain inventory information related to the button.

BMGetInventory Response Fields

Field	Description
HOSTEDBUTTONID	The ID of the hosted button whose inventory you want to set.
TRACKINV	Whether to track inventory levels associated with the button. It is one of the following values: <ul style="list-style-type: none"> 0 - do not track inventory 1 - track inventory
TRACKPNL	Whether to track the gross profit associated with inventory changes. It is one of the following values: <ul style="list-style-type: none"> 0 - do not track the gross profit 1 - track the gross profit <p>NOTE: The gross profit is calculated as the price of the item less its cost, multiplied by the change in the inventory level since the last call to <code>BMSetInventory</code>.</p>
OPTIONINDEX	Option index, which identifies the button. Option index 0 is the menu that contains the price if one exists; otherwise, it is the first menu without a price. Character length and limitations: 1 single-byte alphanumeric character
SOLDOUTURL	The URL to which the buyer's browser is redirected when the inventory drops to 0 <p>NOTE: A value in this field also prevents a sale when the inventory drops to 0; otherwise, sales can continue even when inventory is unavailable.</p> <p>Character length and limitations: 127 single-byte alphanumeric characters</p>

Item Tracking Details Fields

ITEMNUMBER	The ID for an item associated with this button
ITEMQTY	The current inventory level of the item associated with this button
ITEMQTYDELTA	Not used
ITEMALERT	The quantity of the item associated with this button below which PayPal sends you an email notification
ITEMCOST	The cost of the item associated with this button

Option Tracking Details Fields

L_OPTIONNUMBER n	The menu item's ID for an option in a dropdown menu It is a list of variables for each menu item, in which n is a digit between 0 and 9, inclusive.
L_OPTIONQTY n	The current inventory level of the option associated with this menu item It is a list of variables for each menu item, in which n is a digit between 0 and 9, inclusive.
L_OPTIONSELECT n	The menu item's name in a dropdown menu It is a list of variables for each menu item, in which n is a digit between 0 and 9, inclusive.
L_OPTIONQTYDELTA n	Not used It is a list of variables for each menu item, in which n is a digit between 0 and 9, inclusive.
L_OPTIONALERT n	The quantity of the option associated with this menu item below which PayPal sends you an email notification It is a list of variables for each menu item, in which n is a digit between 0 and 9, inclusive.
L_OPTIONCOST n	The cost of the option associated with this menu item It is a list of variables for each menu item, in which n is a digit between 0 and 9, inclusive.

A

HTML Variables for Website Payments Standard

This appendix provides reference information for all HTML variables supported for use with Buy Now, Donation, Subscribe, Add to Cart, and View Cart buttons, as well as HTML variables supported the Cart Upload command.

Read the following topics to learn about the kinds of HTML variables that you can use:

- [“Technical HTML Variables” on page 41](#)
- [“HTML Variables for Individual Items” on page 42](#)
- [“HTML Variables for Payment Transactions” on page 48](#)
- [“HTML Variables for Shopping Carts” on page 50](#)
- [“HTML Variables for Subscribe Buttons” on page 52](#)
- [“HTML Variables for Displaying PayPal Checkout Pages” on page 55](#)
- [“HTML Variables for Prepopulating PayPal Checkout Pages” on page 58](#)

Technical HTML Variables

Technical HTML variables control how PayPal responds technically when people click Buy Now, Donation, Subscribe, Add to Cart, and View Cart buttons or when third party or custom carts initiate payment processing with the Cart Upload command. They also control how your buttons interact with special PayPal features.

Allowable Values for the cmd HTML Variable

Value of cmd	Description
_xclick	The button that the person clicked was a Buy Now button.
_donations	The button that the person clicked was a Donate button.
_xclick-subscriptions	The button that the person clicked was a Subscribe button.
_oe-gift-certificate	The button that the person clicked was a Buy Gift Certificate button.
_cart	For shopping cart purchases; these additional variables specify the kind of shopping cart button that the person clicked: <ul style="list-style-type: none"> • add – Add to Cart buttons for the PayPal Shopping Cart • display – View Cart buttons for the PayPal Shopping Cart • upload – The Cart Upload command for third party carts
_s-xclick	The button that the person clicked was protected from tampering by using encryption, or the button was saved in the merchant's PayPal account. PayPal determines which kind of button was clicked by decoding the encrypted code or by looking up the saved button in the merchant's account.

HTML Variables for Special PayPal Features

Name	Required or Optional	Description	Character Length
notify_url	Optional	The URL to which PayPal posts information about the transaction, in the form of Instant Payment Notification messages.	255
hosted_button_id	Required for buttons that have been saved in PayPal accounts; otherwise, not allowed.	The identifier of a button that was saved in a merchant's PayPal account. Allowable values are assigned by PayPal when payments buttons are first created and saved merchants' PayPal accounts. NOTE: A merchant's PayPal account can have a maximum of 1,000 saved payment buttons.	See description.

HTML Variables for Individual Items

HTML variables for individual items specify information about a product or service for Buy Now and Add to Cart buttons, or they specify information about a contribution for Donate buttons.

HTML Variables for Individual Items

Name	Required or Optional	Description	Character Length
amount	See description.	<p>The price or amount of the product, service, or contribution, not including shipping, handling, or tax. If omitted from Buy Now or Donate buttons, payers enter their own amount at the time of payment.</p> <ul style="list-style-type: none"> • Required for Add to Cart buttons • Optional for Buy Now and Donate buttons • Not used with Subscribe or Buy Gift Certificate buttons 	
discount_amount	Optional	<p>Discount amount associated with an item.</p> <p>It must be less than the selling price of the item. If you specify discount_amount and discount_amount2 is not defined, then this flat amount is applied regardless of the quantity of items purchased.</p> <p>Valid only for Buy Now and Add to Cart buttons.</p>	
discount_amount2	Optional	<p>Discount amount associated with each additional quantity of the item.</p> <p>It must be equal to or less than the selling price of the item. A discount_amount must also be specified as greater than or equal to 0 for discount_amount2 to take effect.</p> <p>Valid only for Buy Now and Add to Cart buttons.</p>	
discount_rate	Optional	<p>Discount rate (percentage) associated with an item.</p> <p>It must be set to a value less than 100. If you do not set discount_rate2, the value in discount_rate applies only to the first item regardless of the quantity of items purchased.</p> <p>Valid only for Buy Now and Add to Cart buttons.</p>	
discount_rate2	Optional	<p>Discount rate (percentage) associated with each additional quantity of the item.</p> <p>It must be equal to or less 100. A discount_rate must also be specified as greater than or equal to 0 for discount_rate2 to take effect.</p> <p>Valid only for Buy Now and Add to Cart buttons.</p>	
discount_num	Optional	<p>Number of additional quantities of the item to which the discount applies.</p> <p>Applicable when you use discount_amount2 or discount_rate2. Use this variable to specify an upper limit on the number of discounted items.</p> <p>Valid only for Buy Now and Add to Cart buttons.</p>	

Name	Required or Optional	Description	Character Length
item_name	See description.	Description of item. If omitted, payers enter their own name at the time of payment. <ul style="list-style-type: none"> Optional for Buy Now, Donate, Subscribe and Add to Cart buttons Not used with Buy Gift Certificate buttons 	127
item_number	Optional	Pass-through variable for you to track product or service purchased or the contribution made. The value you specify passed back to you upon payment completion.	127
quantity	Optional	Number of items. If profile-based shipping rates are configured with a basis of quantity, the sum of quantity values is used to calculate the shipping charges for the transaction. PayPal appends a sequence number to uniquely identify the item in the PayPal Shopping Cart (e.g., quantity1, quantity2). <p>NOTE: The value for quantity must be a positive integer. Null, zero, or negative numbers are not allowed.</p>	
shipping	Optional	The cost of shipping this item. If you specify shipping and shipping2 is not defined, this flat amount is charged regardless of the quantity of items purchased. <p>This use of the shipping variable is valid only for Buy Now and Add to Cart buttons.</p> <p>Default – If profile-based shipping rates are configured, buyers are charged an amount according to the shipping methods they choose.</p>	
shipping2	Optional	The cost of shipping each additional unit of this item. If omitted and profile-based shipping rates are configured, buyers are charged an amount according to the shipping methods they choose. <p>Valid only for Buy Now and Add to Cart buttons.</p>	
tax	Optional	Transaction-based tax override variable. Set this to a flat tax amount to apply to the transaction regardless of the buyer's location. This value overrides any tax settings set in your account profile. Valid only for Buy Now and Add to Cart buttons. Default – Profile tax settings, if any, apply.	
tax_rate	Optional	Transaction-based tax override variable. Set this to a percentage that will be applied to amount multiplied the quantity selected during checkout. This value overrides any tax settings set in your account profile. Allowable values are numbers 0.001 through 100. Valid only for Buy Now and Add to Cart buttons. Default – Profile tax settings, if any, apply.	6

Name	Required or Optional	Description	Character Length
undefined_quantity	Optional	1 – allows buyers to specify the quantity. <ul style="list-style-type: none"> • Optional for Buy Now buttons • Not used with other buttons 	1
weight	Optional	Weight of items. If profile-based shipping rates are configured with a basis of weight, the sum of <code>weight</code> values is used to calculate the shipping charges for the transaction.	
weight_unit	Optional	The unit of measure if <code>weight</code> is specified. Allowable values: <ul style="list-style-type: none"> • lbs • kgs The defaults is lbs.	
on0	Optional	First option field name and label. The <code>os0</code> variable contains the corresponding value for this option field. For example, if <code>on0</code> is <code>size</code> , <code>os0</code> could be <code>large</code> . <ul style="list-style-type: none"> • Optional for Buy Now, Subscribe, and Add to Cart buttons • Not used with Donate or Buy Gift Certificate buttons 	64
on1	Optional	Second option field name and label. The <code>os1</code> variable contains the corresponding value for this option field. For example, if <code>on1</code> is <code>color</code> then <code>os1</code> could be <code>blue</code> . You can specify a maximum of 7 option field names (6 with Subscribe buttons) by incrementing the option name index (<code>on0</code> through <code>on6</code>). <ul style="list-style-type: none"> • Optional for Buy Now, Subscribe, and Add to Cart buttons • Not used with Donate or Buy Gift Certificate buttons 	64

Name	Required or Optional	Description	Character Length
os0	Optional	<p>Option selection of the buyer for the first option field, on0. If the option field is a dropdown menu or a set of radio buttons, each allowable value should be no more than 64 characters. If buyers enter this value in a text field, there is a 200-character limit.</p> <p>NOTE: The option field on0 must also be defined. For example, it could be size.</p> <p>For priced options, include the price and currency symbol in the text of the option selections, as the following sample code shows:</p> <pre><option value="small">small - \$10.00</option></pre> <p>Add a corresponding option_select0 and option_amount0 variable for each priced option. Priced options are supported only for Buy Now and Add to Cart buttons. Only one dropdown menu option selection can have priced options.</p> <ul style="list-style-type: none"> • Optional for Buy Now, Subscribe, and Add to Cart buttons • Not used with Donate or Buy Gift Certificate buttons 	64 or 200 See description.
os1	Optional	<p>Option selection of the buyer for the second option field, on1. If the option field is a dropdown menu or a set of radio buttons, each allowable value should be no more than 64 characters. If buyers enter this value in a text field, there is a 200-character limit.</p> <p>You can specify a maximum of 7 option selections (6 with Subscribe buttons) by incrementing the option selection index (os0 through os6). You can implement up to 5 option selections as dropdown menus and up to 2 option selections as test boxes.</p> <p>NOTE: A corresponding option field (on0 through on6) must be defined.</p> <ul style="list-style-type: none"> • Optional for Buy Now, Subscribe, and Add to Cart buttons • Not used with Donate or Buy Gift Certificate buttons 	64 or 200 See description.
option_index	See description.	<p>The cardinal number of the option field, on0 through on9, that has product options with different prices for each option. You must include option_index if the option field with prices is not on0.</p> <ul style="list-style-type: none"> • Optional for Buy Now and Add to Cart buttons • Not used with Donate, Subscribe, or Buy Gift Certificate buttons <p>Default – 0</p>	

Name	Required or Optional	Description	Character Length
option_select0	Optional	<p>For priced options, the value of the first option selection of the on0 dropdown menu. The values must match exactly, as the next sample code shows:</p> <pre><option value="small">small - \$10.00</option> ... <input type="hidden" name="option_select0" value="small"></pre> <ul style="list-style-type: none"> • Optional for Buy Now and Add to Cart buttons • Not used with Donate, Subscribe, or Buy Gift Certificate buttons 	64
option_amount0	Optional	<p>For priced options, the amount that you want to charge for the first option selection of the on0 dropdown menu. Use only numeric values; the currency is taken from the currency_code variable. For example:</p> <pre><option value="small">small - \$10.00... <input type="hidden" name="option_amount0"> value="10.00"></pre> <ul style="list-style-type: none"> • Optional for Buy Now and Add to Cart buttons • Not used with Donate, Subscribe, or Buy Gift Certificate buttons 	64
option_select1	Optional	<p>For priced options, the value of the second option selection of the on0 dropdown menu. For example:</p> <pre>... <option value="medium">small - \$10.00</option>... <input type="hidden" name="option_select" value="medium"></pre> <p>You can specify a maximum of ten option selections by incrementing the option selection index (option_select0 through option_select9).</p> <p>NOTE: A corresponding option selection in os0 must also be set.</p> <ul style="list-style-type: none"> • Optional for Buy Now and Add to Cart buttons • Not used with Donate, Subscribe, or Buy Gift Certificate buttons 	64

Name	Required or Optional	Description	Character Length
option_amount1	Optional	<p>For priced options, the amount that you want to charge for the second option selection of the on0 dropdown menu. For example:</p> <pre>... <option value="small">medium - \$15.00</option> ... <input type="hidden" name="option_amount1" value="15.00"></pre> <p>You can specify a maximum of ten option amounts by incrementing the option amount index (option_amount0 through option_amount9).</p> <p>NOTE: A corresponding option selection in os0 must also be set.</p> <ul style="list-style-type: none">• Optional for Buy Now and Add to Cart buttons• Not used with Donate, Subscribe, or Buy Gift Certificate buttons	64

HTML Variables for Payment Transactions

HTML variables for payment transactions provide information about entire transactions, regardless of the individual items involved with the payment. You can use these variables with Add to Cart buttons and the Cart Upload command.

HTML Variables for Payment Transactions

Name	Required or Optional	Description	Character Length
address_override	Optional	1 – The address specified in prepopulation variables overrides the PayPal member's stored address. The payer is shown the passed-in address but cannot edit it. No address is shown if the address is not valid, such as missing required fields like country, or is not included at all.	1
currency_code	Optional	The currency of the payment. The default is USD.	3
custom	Optional	Passthrough variable never presented to the payer. Default – No variable is passed back to you.	256
handling	Optional	Handling charges. This is not quantity-specific. The same handling cost applies, regardless of the number of items on the order. Default – No handling charges are included.	
invoice	Optional	Passthrough variable you can use to identify your invoice number for this purchase. Default – No variable is passed back to you.	127
shipping	Optional	The cost of shipping the entire order contained in third-party shopping carts. This use of the <code>shipping</code> variable is valid only for the Cart Upload command. Default – If profile-based shipping rates are configured, buyers are charged an amount according to the shipping methods they choose.	
tax_cart	Optional	Cart-wide tax, overriding any individual item <code>tax_x</code> value	
weight_cart	Optional	If profile-based shipping rates are configured with a basis of weight, PayPal uses this value to calculate the shipping charges for the transaction. This value overrides the <code>weight</code> values of individual items.	
weight_unit	Optional	The unit of measure if <code>weight_cart</code> is specified. Allowable values: <ul style="list-style-type: none"> • lbs • kgs The default value is lbs.	

HTML Variables for Shopping Carts

HTML variables for shopping carts can be used with Add to Cart buttons, as well as with third party shopping carts or custom carts that initiate payment processing with the Cart Upload command.

HTML Variables for Shopping Carts

Name	Required or Optional	Description	Character Length
add	See description	<p>Add an item to the PayPal Shopping Cart.</p> <p>This variable must be set as follows:</p> <p><code>add="1"</code></p> <p>The alternative is the <code>display="1"</code> variable, which displays the contents of the PayPal Shopping Cart to the buyer.</p> <p>If both <code>add</code> and <code>display</code> are specified, <code>display</code> takes precedence.</p>	1
amount	Required	Price of the item or the total price of all items in the shopping cart.	
business	Required	Your PayPal ID or an email address associated with your PayPal account. Email addresses must be confirmed.	
discount_amount_cart	Optional	<p>Single discount amount to be charged cart-wide.</p> <p>It must be less than the selling price of all items combined in the cart. This variable overrides any individual item <code>discount_amount_x</code> values, if present.</p> <p>Applies only to the Cart Upload command.</p>	
discount_amount_x	Optional	<p>The discount amount associated with item <code>x</code>.</p> <p>It must be less than the selling price of the associated item. This amount is added with any other item discounts in the cart.</p> <p>Applies only to the Cart Upload command.</p>	
discount_rate_cart	Optional	<p>Single discount rate (percentage) to be charged cart-wide.</p> <p>It must be set to a value less than 100. The variable overrides any individual item <code>discount_rate_x</code> values, if present.</p> <p>Applies only to the Cart Upload command.</p>	
discount_rate_x	Optional	<p>The discount rate associated with item <code>x</code>.</p> <p>It must be set to a value less than 100. The variable takes into account all quantities of item <code>x</code>.</p> <p>Applies only to the Cart Upload command.</p>	
display	See description.	<p>Display the contents of the PayPal Shopping Cart to the buyer. This variable must be set as follows:</p> <p><code>display="1"</code></p> <p>The alternative is the <code>add="1"</code> variable, which adds an item to the PayPal Shopping Cart.</p> <p>If both <code>add</code> and <code>display</code> are specified, <code>display</code> takes precedence.</p>	1

HTML Variables for Website Payments Standard

HTML Variables for Subscribe Buttons

Name	Required or Optional	Description	Character Length
handling_cart	Optional	Single handling fee to be charged cart-wide. If handling_cart is used in multiple Add to Cart buttons, the handling_cart value of the first item is used.	
item_name	Required	Name of the item or a name for the entire Shopping Cart

t1	See description.	Trial period 1 units of duration. Required if you specify a1. Allowable values: <ul style="list-style-type: none"> • D – for days; allowable range for p1 is 1 to 90 • W – for weeks; allowable range for p1 is 1 to 52 • M – for months; allowable range for p1 is 1 to 24 • Y – for years; allowable range for p1 is 1 to 5 	1
a2	Optional	Trial period 2 price. Can be specified only if you also specify a1.	
p2	See description.	Trial period 2 duration. Required if you specify a2. Specify an integer value in the allowable range for the units of duration that you specify with t2.	2
t2	See description.	Trial period 2 units of duration. Allowable values: <ul style="list-style-type: none"> • D – for days; allowable range for p2 is 1 to 90 • W – for weeks; allowable range for p2 is 1 to 52 • M – for months; allowable range for p2 is 1 to 24 • Y – for years; allowable range for p2 is 1 to 5 	1
a3	Required	Regular subscription price.	
p3	Required	Subscription duration. Specify an integer value in the allowable range for the units of duration that you specify with t3.	2
t3	Required	Regular subscription units of duration. Allowable values: <ul style="list-style-type: none"> • D – for days; allowable range for p3 is 1 to 90 • W – for weeks; allowable range for p3 is 1 to 52 • M – for months; allowable range for p3 is 1 to 24 • Y – for years; allowable range for p3 is 1 to 5 	1

Name	Required or Optional	Description	Character Length
src	Optional	Recurring payments. Subscription payments recur unless subscribers cancel their subscriptions before the end of the current billing cycle or you limit the number of times that payments recur with the value that you specify for <code>srt</code> . Allowable values: <ul style="list-style-type: none"> • 0 – subscription payments do not recur • 1 – subscription payments recur The default is 0.	1
srt	Optional	Recurring times. Number of times that subscription payments recur. Specify an integer above 1. Valid only if you specify <code>src="1"</code> .	1
sra	Optional	Reattempt on failure. If a recurring payment fails, PayPal attempts to collect the payment two more times before canceling the subscription. Allowable values: <ul style="list-style-type: none"> • 0 – do not reattempt failed recurring payments • 1 – reattempt failed recurring payments before canceling The default is 0.	1
no_note	Required	Do not prompt payers to include a note with their payments. Allowable values for Subscribe buttons: <ul style="list-style-type: none"> • 1 – hide the text box and the prompt For Subscribe buttons, always include <code>no_note</code> and set it to 1.	1
custom	Optional	User-defined field which will be passed through the system and returned in your merchant payment notification email. This field will not be shown to your subscribers.	255
invoice	Optional	User-defined field which must be unique with each subscription. The invoice number will be shown to subscribers with the other details of their transactions	127
modify	Optional	Modification behavior. Allowable values: <ul style="list-style-type: none"> • 0 – allows subscribers to only create new subscriptions • 1 – allows subscribers to modify their current subscriptions or sign up for new ones • 2 – allows subscribers to only modify their current subscriptions The default value is 0.	1
usr_manage	Optional	Set to 1 to have PayPal generate usernames and initial passwords for subscribers.	1

HTML Variables for Displaying PayPal Checkout Pages

HTML variables for displaying PayPal checkout pages control how the pages appear and function.

HTML Variables for Displaying PayPal Checkout Pages

Name	Required or Optional	Description	Character Length
page_style	Optional	<p>The custom payment page style for checkout pages. Allowable values:</p> <ul style="list-style-type: none"> • <code>paypal</code> – use the PayPal page style • <code>primary</code> – use the page style that you marked as primary in your account profile • <code>page_style_name</code> – use the custom payment page style from your account profile that has the specified name <p>The default is <code>primary</code> if you added a custom payment page style to your account profile. Otherwise, the default is <code>paypal</code>.</p>	30
image_url	Optional	<p>The URL of the 150x50-pixel image displayed as your logo in the upper left corner of the PayPal checkout pages.</p> <p>Default – Your business name, if you have a Business account, or your email address, if you have Premier or Personal account.</p>	1,024
cpp_header_image	Optional	<p>The image at the top left of the checkout page. The image's maximum size is 750 pixels wide by 90 pixels high. PayPal recommends that you provide an image that is stored only on a secure (https) server.</p>	No limit
cpp_headerback_color	Optional	<p>The background color for the header of the checkout page.</p> <p>Valid value is case-insensitive six-character HTML hexadecimal color code in ASCII.</p>	6
cpp_headerborder_color	Optional	<p>The border color around the header of the checkout page. The border is a 2-pixel perimeter around the header space, which has a maximum size of 750 pixels wide by 90 pixels high.</p> <p>Valid value is case-insensitive six-character HTML hexadecimal color code in ASCII.</p>	6
cpp_payflow_color	Optional	<p>The background color for the checkout page below the header.</p> <p>Valid value is case-insensitive six-character HTML hexadecimal color code in ASCII.</p> <p>NOTE: Background colors that conflict with PayPal's error messages are not allowed; in these cases, the default color is white.</p>	6
cs	Optional	<p>The background color of the checkout page. Allowable values:</p> <ul style="list-style-type: none"> • 0 – background color is white • 1 – background color is black <p>The default is 0.</p>	1

Name	Required or Optional	Description	Character Length
lc	Optional	The language of the login or sign-up page that subscribers see when they click the Subscribe button. If unspecified, the language is determined by a PayPal cookie in the subscriber's browser. If there is no PayPal cookie, the default language is U.S. English. For allowable values, see .	2
no_note	Optional	Do not prompt payers to include a note with their payments. Allowable values: <ul style="list-style-type: none"> • 0 – provide a text box and prompt for the note • 1 – hide the text box and the prompt The default is 0.	1
cn	Optional	Label that appears above the note field. This value is not saved and will not appear in any of your notifications. If omitted, the default label above the note field is "Add special instructions to merchant." The cn variable is not valid with Subscribe buttons or if you include no_note="1".	90
no_shipping	Optional	Do not prompt payers for shipping address. Allowable values: <ul style="list-style-type: none"> • 0 – prompt for an address, but do not require one • 1 – do not prompt for an address • 2 – prompt for an address, and require one The default is 0.	1
return	Optional	The URL to which the payer's browser is redirected after completing the payment; for example, a URL on your site that displays a "Thank you for your payment" page. Default – The browser is redirected to a PayPal web page.	1,024
rm	Optional	Return method. The FORM METHOD used to send data to the URL specified by the return variable after payment completion. Allowable values: <ul style="list-style-type: none"> • 0 – all shopping cart transactions use the GET method • 1 – the payer's browser is redirected to the return URL by the GET method, and no transaction variables are sent • 2 – the payer's browser is redirected to the return URL by the POST method, and all transaction variables are also posted The default is 0. NOTE: The rm variable takes effect only if the return variable is also set.	1

Name	Required or Optional	Description	Character Length
cbt	Optional	Sets the text for the Return to Merchant button on the PayPal Payment Complete page. For Business accounts, the return button displays your business name in place of the word “Merchant” by default. For Donate buttons, the text reads “Return to donations coordinator” by default. NOTE: The <code>return</code> variable must also be set.	60
cancel_return	Optional	A URL to which the payer’s browser is redirected if payment is cancelled; for example, a URL on your website that displays a “Payment Canceled” page. Default – The browser is redirected to a PayPal web page.	1,024

HTML Variables for Prepopulating PayPal Checkout Pages

HTML variables for prepopulating PayPal checkout pages let you specify information about the payer.

HTML Variables for Prepopulating Checkout Pages With Payer Information

Name	Required or Optional	Description	Character Length
address1	Optional	Street (1 of 2 fields)	100
address2	Optional	Street (2 of 2 fields)	100
city	Optional	City	40
country	Optional	Sets shipping and billing country.	2
first_name	Optional	First name	32
last_name	Optional	Last name	64
lc	Optional	Sets the payer’s language for the billing information/log-in page only. The default is US.	2
charset	Optional	Sets the character encoding for the billing information/log-in page, for the information you send to PayPal in your HTML button code, and for the information that PayPal returns to you as a result of checkout processes initiated by the payment button. The default is based on the character encoding settings in your account profile.	21
